## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, 23-30, drawn to a bent axis pump/motor, classified in class 92, subclass 12.2.
- II. Claims 20-22, drawn to a fluid source device with reversible flow valve, classified in class 60, subclass 493.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions:

Invention of group I is a bent axis pump/motor which is not required to include a valve configured to selectively control fluid flow.

Invention of group II is a pump/motor having a valve configured to selectively control fluid flow but not required to be a bent axis pump/motor.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3745

A telephone call was made to Ms. Lorraine Linford (Reg. No. 35,939) on 09/21/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
